

**GARAGE DOOR OPERATORS** 

USA & Canada (800) 835-5666 & (800) 421-1587 Toll Free FAX (800) 468-1340

## **INSTALLATION INSTRUCTIONS**

#### **For Sectional and Jamb Type Doors**

#### IMPORTANT SAFETY NOTES

Please read the instructions carefully! This garage door THE FOLLOWING FORMATS ARE USED FOR operator is designed to provide safe and reliable service if installed and tested as described in these instructions. A garage door is the largest mechanical appliance in a residence. Care must be taken to prevent injury or death | This type of warning note is used to indicate during installation and operation of the garage door and possible mechanical hazards that may cause

serious injuries or death.

SAFETY NOTES IN THESE INSTRUCTIONS.

This type of warning note is used to indicate possible electrical shock hazards that may cause serious injuries or death.

garage door operator.

**A** CAUTION **A** This type of warning note is used to indicate the possibility of damage to the garage door or

## IMPORTANT INSTALLATION SAFETY INSTRUCTIONS

## A WARNING A

## TO REDUCE THE RISK OF SEVERE INJURY OR DEATH TO PERSONS, REVIEW THESE INSTALLATION SAFETY STEPS BEFORE PROCEEDING

- READ AND FOLLOW ALL INSTALLATION INSTRUCTIONS.
- 2 Install only on a properly balanced garage door. An improperly balanced door could result in severe injury or death. Repairs to cables, spring assemblies, and other hardware must be made by a qualified service person before installing the operator.
- Disable all locks and remove all ropes connected to the garage door before installing the operator. Ropes connected to a garage door can cause entanglement and death.
- If possible, install door operator 7 feet or more above the floor with the manual release handle mounted 6 feet above the floor.
- 5 Do not connect the operator to the power source until instructed to do so.
- 6 Locate the wall station within sight of the door at a minimum height of 5 feet so that small children cannot reach it. Locate the wall station away from all moving parts of the door.
- Install the User Safety Label on the wall adjacent to the wall station.
- Upon completion of the installation, the door must reverse when it comes in contact with a 1-1/2" high object (or a 2x4 laid flat at the center of the door) on the floor and when the infrared safety beam is
- 9 Do not wear watches, rings or loose clothing while installing or servicing an operator. Jewelry or loose clothing can be caught in the mechanism of the garage door or the operator.
- 10 DISCONNECT THE ELECTRIC POWER FROM THE GARAGE DOOR OPERATOR BEFORE MAKING ANY REPAIRS OR REMOVING THE COVER.

#### Check the Door Balance

- 1 From outside the garage, slowly open the door all the way, and then close it all the way. Notice if there is any binding, sticking or rubbing. The door should move smoothly in both directions.
- 2 Raise the garage door about halfway up. Carefully release the door and see if the door balances. It should stay in place. Close the door.
- ➤ **IMPORTANT:** If the garage door is unbalanced or the door travel isn't smooth, have a qualified garage door professional adjust or repair the door.

#### 2 Attach the Rail to the Operator 1 Place the operator head on the garage floor with

- cardboard underneath it to protect the finish ➤ NOTE: To prevent upsetting the pre-adjusted door
- on the rail until the sprocket is on the drive shaft. 2 Align the rail over the center of the operator head.
- **3** Be sure the flat on the sprocket lines up with the flat on the drive shaft
- 4 Slide the sprocket onto the shaft.
- 5 Attach the rail to the operator head by installing four MATING THE SPROCKET AND SHAF 1/4-20 x 3/4" bolts.
- 6 Tighten the four bolts in the order shown with a 7/16

BELT RAILS HBT7 ONLY! -TURN THE OPERATOR'S OPEN LIMIT 4 TURNS II THE DOWN DIRECTION BEFORE OPERATING UNIT.

#### **Locate the Header Bracket Position**

- Check whether door is a sectional or one-piece jamb type. Note the differences in mounting header bracket, door arm assembly and hanging the operator. 2 Close the door.
- 3 From inside the garage, use a pencil to mark the vertical centerline of the door on the header wall and on the top panel of a sectional door or on the top edge of a jamb door.
- 4 Examine the area above the center of the door on the door header wall for a header bracket mounting location.
- 5 Open the door to the high-rise point (the point where the top edge of the door is highest above the floor) and measure the distance to the floor.
- 6 Close the door and use a pencil to mark the header wall 1" above (sectional) or 7" above (jamb) the measured high-rise point.
- ➤ NOTE: In some installations, the header bracket location will be higher than the door header. This will require adding a 2x4 (or larger) cross piece to the wall studs to provide a mounting location for the header bracket. Use lag screws (not supplied) to attach the 2x4 to the studs.
- 7 On sectional doors with low headroom, the header bracket can be attached to the ceiling up to 6" back from the header wall (see next step).

#### 4 Install the Header Bracket

#### Attaching the Header Bracket to the Wall

- 1 Hold the header bracket on the center line drawn above the door with the bottom edge of the bracket on the line marked above the high-rise point.
- 2 Use a pencil to mark the two bracket holes.
- 3 Drill two 3/16" pilot holes about 2" deep.
- 4 Use a ½" socket to fasten the bracket with two 5/16" x 2"

#### Attaching the Header Bracket to the Ceiling

- NOTE: On a finished ceiling, be sure there is a joist to fasten to under the sheetrock where the header bracket will be located (use a stud finder). If there is none, install a 2x4 cross piece between the two closest joists to fasten the header bracket onto. 1 Extend the center line drawn on the header wall along
- the ceiling. 2 Hold the bracket on the center line with the edge of the
- bracket no further than 6" from the header wall
- **3** Use a pencil to mark the two bracket holes. 4 Drill two 3/16" pilot holes about 2" deep.
- 5 Use a 1/2" socket to fasten the bracket with two 5/16" x 2" lag screws.

- floor with rail towards the door.
- 3 Insert the 5/16" x 2-3/8" clevis pin through header bracket and rail

#### 6 Hang the Operator

Installation requirements vary with garage construction. Hanging brackets should be angled to provide rigid support. Hanging material is not provided. Angle iron and lag screws are recommended. DO NOT USE NAILS. Following are typical operator hanging methods. Certain installations will require improvised methods.

- 1 Raise the operator head and set it on top of a stepladder (use extra spacers on top of ladder if it isn't tall enough).
- 2 SECTIONAL DOORS: Carefully open the door to the full up position. Lay a 2x4 across the top section of the door as a spacer. Adjust the operator height until the rail touches the spacer. The rail should be close to level.
- JAMB DOORS: Carefully open the door to the highrise point. Adjust the operator height until the rail is 2" above the door high-rise point. The rail should angle up towards the header wall.
- 3 Center the operator head and rail with the centerline mark on the top of the door.
- 4 For finished ceilings only: An angle iron cross piece between the two closest joists above the operator will be required. Mark mounting hole locations, drill pilot holes and attach the piece with two lag screws (not supplied).
- 5 Measure the distance from each of the operator's hanging tabs to the ceiling joists or angle iron cross piece.
- hanging brackets. Bend brackets if required. • For unfinished ceilings: Hold each bracket in place and use a pencil to mark the locations where they will
- be attached to the joists, drill pilot holes and attach the pieces with two lag screws (not supplied). For finished ceilings with an angle iron cross piece:
- Attach the two hanging brackets to the cross piece with two bolts and two keps nuts (not supplied). Attach operator to hanging brackets using two 5/16-18 x
- 1" hex bolts and two 5/16-18 keps nuts (supplied). Insert bolts from the inside of hanger brackets with the nuts on the outside of the operator. Tighten nuts with a ½" socket.
- 8 Tighten all hanging hardware. 9 Open and close the door manually. The door should
- clear the rail by at least 1". 10 Attach the trolley's release lever to the red release

handle with the cord supplied so the handle is at least

6 feet from the floor. Cut off any excess cord. 11 Swing open the light cover to access the lamp socket. Install a 100 watt maximum rough service in the lamp socket. Swing the light cover closed, snapping it shut.

# PLACE A 2x4 SPACER BETWEEN THE DOOR AND RAIL SECTIONAL DOOR AS REQUIRE HIGH-RISE POINT AND / BOTTOM OF RAIL JAMB DOOR

#### Install the Wall Station

## A WARNING A

Children operating or playing with a garage door operator can injure themselves or others. The garage door could cause serious injury or death. Do not allow children to operate the remote control(s) or the wall station. Install the wall station out of reach of children and away from all moving parts of the door. The door must be clearly visible from the wall station. A moving garage door could injure someone under it. Only activate the door when it is properly adjusted, when it can be seen clearly and when there are no obstructions to the door travel.

- ➤ NOTE: 22 AWG 2-conductor wall station and safety beam wire is supplied with the operator. Use this wire or the installation's pre-wiring. For additional wire, contact Linear for information regarding the 24-pack Model HAE00009 wire and wire clip kit.
- ➤ UL NOTE: All low voltage Class 2 cable used with this operator must be UL Listed Type CL2, CL2P, CL2R, or CL2X or other cable with equivalent or better electrical, mechanical, and flammability ratings.
- 1 Strip back ½" of insulation and connect a wire to each of the two terminals on the back of the wall station.
- 2 Use the screws provided to mount the wall station near an access door at a minimum height of five feet. SEE IMPORTANT WARNING ABOVE!
- 3 For non-prewired installations, route the wire to the back of the operator. Use insulated staples (not supplied) to secure the wire. Staples must straddle both wires to avoid electrical shorts.
- 4 Cut the wall station wire about 6" longer than needed to reach the operator terminals. Strip back ½" of insulation.
- 5 Connect either wire to the operator's PUSHBUTTON terminal and the other wire to the operator's COMMON terminal.
- 6 Apply the User Safety Instruction Label to the wall next to the wall station. Use staples or tacks to help the label remain in place over time.
- ➤ IMPORTANT! DO NOT PLUG THE OPERATOR IN AT THIS TIME! More installation is required.

➤ NOTE: The safety beam's infrared light beam must

not be obstructed by the door, or by any part of the

door hardware. Use wooden spacers between the

beam brackets and wall if necessary to create proper

8 Install the Safety Beam

obstacle sensing system.

clearance.

TO HOLD UNIT'S POSITION

MARKING THE CORRECT BEAM BRACKET HEIGHT

#### 2 Position the assembled brackets on each side of the door so the center line of the safety beam lenses will be 6" above the floor. Use the index marks on the brackets to make the bracket assemblies equal lengths. Mark the locations for the bracket mounting screws (the brackets can be wall or floor mounted).

➤ NOTE: The safety beam receiver (the unit with two

indicators) should be located on the "shady" side of

the door to prevent sunlight from shining directly into the receiver's lens. 3 Drill two 3/16" pilot holes for lag screws at marks. Mount the brackets with two 1/4" x 1-1/4" lag screws and tighten with a 7/16" socket (or use proper concrete

fasteners if floor mounting)

- 4 Insert the sender and receiver into the bracket holes so the lenses of the units will face each other. Twist the units until the spring clips lock into a detent mark on the brackets. To protect the units from being bumped after installation, it is recommended to mount the sender and receiver inside the brackets as shown.
- ➤ IMPORTANT: Be careful to route the safety beam wiring away from any moving parts of the door or operator
- **5** For non-prewired installations, route the wires from the sender and receiver, up the wall above the door hardware, then over to the center of the door, then along the top of the rail (or ceiling), and back to the operator head. Cut the wires about 6" longer than needed to reach the operator terminals. Strip back 1/2" of insulation from the ends of the wires.
- 6 For non-prewired installations, secure all the wires to the wall and ceiling with insulated staples (not supplied). Staples must straddle both wires to prevent shorts. Secure the wire to the top of the rail with wire clips (supplied). 7 At the operator, twist one wire from each pair together,
- then twist the other wire from each pair together. 8 Attach either twisted connection to the operator's BEAM terminal. Connect the other twisted connection to the operator's COMMON terminal.

# **SECTIONAL DOORS** 1 Fully close the door. Hold the door bracket against the

Install the Door Bracket and Door Arm

- 4 Slide the 5/16" x 1-3/8" clevis pin through one hole on door bracket; then the single hole on the curved door arm; then through the other hole on the door bracket. Secure the clevis pin with the hitch pin.
- 5 Insert the single hole end of the straight door arm into the slot in the trolley. Slide the 1-1/8" clevis pin through the hole and secure it with a hitch pin.
- 6 Flip the trolley release lever to disconnect the trolley.
- 7 Rotate the curved door arm upward to meet the straight door arm connected to the trolley. Align the two door arms so that the holes in both arms overlap.
- ➤ NOTE: The straight door arm should be slightly angled toward the operator head. **JAMB DOORS**
- 1 With the door fully open, hold the door bracket on the vertical centerline drawn on top edge of the door. Use a pencil to mark the four mounting holes of the bracket. 2 Drill 1/4" holes at marks and fasten the bracket with two
- 5/16" x 2" lag screws to the top of the door. 3 Slide the 5/16" x 1-3/8" clevis pin through one hole on door bracket; then the single hole on the straight door arm; then through the other hole on the door bracket. Secure the clevis pin with the hitch pin.
- 4 Insert the single hole end of the curved door arm into the slot in the trolley. Slide the 1-1/8" clevis pin through the hole and secure it with a hitch pin.
- **5** Flip the trolley release lever to disconnect the trolley.
- 6 Rotate the straight door arm upward to meet the curved door arm connected to the trolley. Align the two door arms so that the holes in both arms overlap. **CONNECTING DOOR ARMS**

## 1 Line up door arms until trolley is positioned as shown.

Connect the arms together using two 5/16-18 x 1" bolts inserted in the highest and lowest matching holes, secure the bolts with two 5/16" keps nuts, tighten with a 1/2" socket.

#### 11 Aligning the Infrared Safety Beam

The safety beam has two components, a sender and a receiver. The sender produces a narrow infrared beam that travels across the bottom of the door opening to the infrared receiver. If an object blocks the infrared beam while the door is closing, the door will stop, then reverse and fully open (the operator's light will flash three times).

As a safety feature, the operator will ignore signals from all remote controls if the door is open and the infrared safety beam is blocked or out of alignment. In this case, the door can be forced closed by pressing and holding the wall station's up/down arrow pushbutton (be sure the door area is in clear view).

With the door closed, disengage the trolley from the chain during these alignment tests by pulling the red release handle.

#### **Safety Beam Test**

- 1 Check that the operator has power. The green lights on the sender and receiver should be lit
- 2 If the receiver's green light is on, but the red light is off, the receiver has power but is not detecting the infrared beam from the sender. The red light might flash when the beam is partially detected. This can be caused by mis-alignment or something blocking the beam. Adjust the safety beam sender and receiver while watching the receiver's red light (stay out of the beam while aligning it). When the red light stays on, the beam is aligned.

SAFETY BEAM INDICATOR TABLE				
GREEN ON	POWER ON			
GREEN OFF	POWER OFF			
RED ON	BEAM OK - NO BLOCKAGE			
RED OFF	BEAM BLOCKED OR MIS-ALIGNED			
RED FLASHING	BEAM ALIGNED POORLY			

- > NOTE: If the receiver's red light remains off, check for: 1) Dirt on the receiver's lens, 2) Sunlight shining into the receiver's lens, 3) A short in the safety beam wiring (from staples or at the operator terminals).
- 3 With the door closed and the operator disengaged from the door, press the wall station's UP/DOWN ARROW button to move the traveler (the part on the belt or chain that the trolley engages with) to the up position (away from the door)
- 4 Push the wall station's UP/DOWN ARROW button again. While the traveler is moving to the down position (toward the door), block the safety beam. THETRAVELER MUST STOP, THEN REVERSE TO THE UP POSITION. The operator's light should flash three times
- 5 Place an object in the path of the safety beam. Check that constant pressure is required on the wall station's UP/DOWN ARROW button to cause the traveler to move toward the down position. Release the pushbutton before the operator stops; check that the traveler returns to the up position.
- ➤ **NOTE:** The garage door operator will not respond to a CLOSE command from a radio transmitter if the safety beam is blocked.
- 6 To reconnect the operator, flip the release lever up. Raise the door manually until the operator

## A WARNING A

Serious injury or death from a closing garage door may result because of failure to test and adjust safety reverse system. Repeat this test onthly and adjust as needed.

ADDING A REMOTE

SEND A SIGNAL

Children operating or playing with a garage door operator can injure themselves or others. The garage door could cause serious injury or death. Do not allow children to operate the remote control(s) or the wall station. A moving garage door could injure or kill someone under it. Activate the operator only when the door is clearly visible, free of obstructions and adjusted

#### **To Add a Remote Control**

seconds or more.

- 1 Press the operator's LEARN button. The red LEARN light will glow. The red light will stay on for about 15 seconds. A remote must be added while the red LEARN light is still on.
- 2 Send a signal from a remote. The red LEARN light and the operator's light will flash once indicating that the operator has accepted the remote.
- 3 Repeat Steps 1 & 2 for any additional remote controls. To Remove all Remote Controls
- 1 Press and hold the operator's LEARN button for ten
- 2 Release the LEARN button. The red LEARN light will blink three times signaling that all of the remotes in the operator's memory were erased. The red LEARN light will turn off, then turn on for 15 seconds. A remote control can be entered during this time using Step 2 above.

#### **Testing**

- 1 Before testing the remote control, straighten out the operator's white antenna wire so it points up.
- 2 Stand clear of the door, press the remote control's button and verify that the operator starts. PRESS THE REMOTE CONTROL'S BUTTON AGAIN TO STOP THE DOOR MID-TRAVEL
- 3 Set the open and close limits as described in the next section before any further testing.

#### **Replacing a Remote Control's Batteries**

When the red light on the remote glows dimly, or fails to light at all when the remote is activated, the batteries need

- 1 Open the remote's case and remove the circuit board. 2 Replace old batteries with two Type 2032 batteries.
- 3 Re-assemble the remote.

#### 13 Adjusting the Open and Close Limits

The limit adjustments that control how far the door will open or close are located on the side of the operator. The limits should be adjusted so the door opens just short of any door stops, and closes right at the floor level. Each full turn of a limit adjustment equals about 2-1/2" of door

## A CAUTION A

Set the open and close limits carefully. Setting the limits beyond the distance that the door can travel could cause damage to the door, the door ardware, or operator.

- If this is a jamb door installation, with the operator at mid-travel, turn the CLOSE LIMIT adjustment five turns in the UP direction before proceeding.
- 2 Activate the remote control. Wait while the door moves to the open position and stops.
- 3 Examine the position of the door.
- If the door needs to open more, turn the OPEN LIMIT adjustment clockwise ¼-turn (towards UP on the label) to raise the open limit.
- If the door needs to open less, turn the OPEN LIMIT adjustment counterclockwise 1/4-turn (towards DOWN on the label) to lower the open limit.
- ➤ **NOTE:** On jamb doors, set the open limit so the door stops just short of level (see figure).
- 4 Activate the remote control. Wait for the door to move down a few feet, then activate the remote control again to stop the door
- 5 Repeat Steps 2-4 until the open limit is properly adjusted.
- 6 Activate the remote control. Wait while the door moves to the closed position and stops.
- 7 Examine the position of the door.
- If the door needs to close more, turn the CLOSE LIMIT adjustment counterclockwise ¼-turn (towards DOWN on the label) to lower the close limit
- If the door needs to close less, turn the CLOSE LIMIT adjustment clockwise ¼-turn (towards UP on the label) to raise the close limit.
- 8 Activate the remote control. Wait for the door to move up a few feet, then activate the remote control again to stop the door.
- 9 Repeat Steps 6-8 until the close limit is properly adjusted.
- ➤ **NOTE:** If the door stops during opening or reverses during closing before reaching the limits, the door force adjustment needs to be set. Change the adjustment as described in the next section then return to this section to finish setting the limits.

# CHECKING WHERE THE DOOR STOPS DOWN **←** UF EXAMINE THE SPOT WHERE THE DOOR STOPS OPENING

SET THE OPEN LIMIT SO THE DOOF

SETTING THE OPEN LIMIT ON A JAMB DOOR

JAMB DOOR

#### 14 Testing & Adjusting the Door Force Safety System

The door force adjustments are located on the side of the SETTING THE DOOR FORCE operator. The door force adjustments must be properly set at all times. The CLOSE FORCE adjustment controls how much force is required to cause the door to reverse direction if an obstruction is encountered during closing. The OPEN FORCE adjustment controls how much force is required to stop the door if an obstruction is encountered during opening.

# WARNING A

Too much door force will interfere with the roper operation of the safety system. SOMEONE COULD BE SERIOUSLY INJURED OR KILLED IF THE DOOR FORCE IS SET TOO HIGH. A closing door might not reverse properly when required and meone could be pinned under it. An opening oor might not stop when going up and someone anging on the door could get pinned between the door and the header. Do not increase the door force beyond what is required to move the loor. DO NOT USE THE DOOR FORCE ADJUSTMENT O COMPENSATE FOR A BINDING OR STICKING GARAGE DOOR. PERFORM THE SAFETY REVERSAL SYSTEM TEST (STEPS 4-6) MONTHLY!

➤ **NOTE:** Read the following directions carefully before setting the door force adjustments.

# **Always perform the Door Force Safety System Test**

after making any adjustments to the operator. **Door Force Safety System Test** 

1 Start with the door open. Use the remote control to cycle the door during these tests.

#### Adjusting the Close Force 2 Turn the CLOSE FORCE adjustment 1/8-turn at a time

- in the DECREASE direction (counterclockwise) until the door stops and reverses mid travel while going down.
- 3 Turn the CLOSE FORCE adjustment 1/8-turn at a time in the INCREASE direction (clockwise) until the door fully closes without reversing.

#### Safety Reversal System Test

- 4 Lay a 2 x 4 board flat on the floor where it will be struck by the center of the door as it closes.
- **5** Verify that the door reverses when it strikes the board. The door must reverse within two seconds after striking the board. ➤ **NOTE:** If the door stops after encountering the board
- DECREASED. 6 Repeat the Safety Reversal System Test until the door reverses within two seconds of striking the board.

and does not reverse, the CLOSE FORCE needs to be

#### Adjusting the Open Force

- Turn the OPEN FORCE adjustment 1/8-turn at a time in the DECREASE direction (counterclockwise) until the door stops mid travel while going up.
- 8 Turn the OPEN FORCE adjustment 1/8-turn at a time in the INCREASE direction (clockwise) until the door fully opens without stopping.

USE A SCREWDRIVER TO ADJUST THE LIMIT

# 15 Using the Garage Door Operator

# IMPORTANT USER SAFETY INSTRUCTIONS

# A WARNING A

## A MOVING GARAGE DOOR CAN CAUSE INJURY OR DEATH! TO REDUCE THE RISK OF DEATH OR SEVERE INJURY:

- READ AND FOLLOW ALL INSTALLATION INSTRUCTIONS.
- NEVER LET CHILDREN OPERATE, OR PLAY WITH DOOR CONTROLS! KEEP REMOTE CONTROL AWAY FROM CHILDREN!
- Always keep moving door in sight and away from people and objects until it is completely closed. NO ONE SHOULD CROSS THE PATH OF THE MOVING DOOR.
- NEVER CRAWL UNDER A STOPPED, PARTIALLY OPEN DOOR.
- Test door operator monthly. The garage door MUST reverse on contact with a 1-1/2 inch object (or a 2x4 board laid flat at the center of the door) on the floor. If adjusting either the force or the limit of travel re-test the door operator. Failure to adjust the operator properly may cause severe injury or death.
- If possible, use the red emergency release handle only when the door is closed. Use caution when using this release with the door open. Weak or broken springs may cause the door to fall rapidly, causing injury or death.
- KEEP GARAGE DOORS PROPERLY BALANCED. (See Garage Door Operator Maintenance) Ar improperly balanced door could cause severe injury or death. Have a qualified service person make repairs to cables, spring assembly and other hardware.

#### **SAVE THESE INSTRUCTIONS.**

#### **Opening the Door**

- 1 With the door in view, press the wall station's UP/ DOWN ARROW button or the button assigned to the operator on the remote control, or enter a valid access code and press START/STOP on a remote keypad.
- 2 When the operator is activated, the operator's light will turn on and the door will begin to open.
- 3 The door will open until the open limit is reached. If an obstacle is encountered (operator's light flashes four times) while the door is opening, the door will stop. 4 The operator's light will stay on for about five minutes
- after the door stops.

## **Closing the Door**

- 1 With the door in view, press the wall station's UP/ DOWN ARROW button or the button assigned to the operator on the remote control, or enter a valid access code and press START/STOP on a remote keypad.
- 2 When the operator is activated, the operator's light will turn on and the door will begin to close. 3 The door will close until the close limit is reached. If an
- obstacle is encountered (operator's light flashes four times), or the safety beam is interrupted (operator's light flashes three times) during closing, the door will stop, then re-open
- 4 The operator's light will stay on for about five minutes after the door stops

#### Stopping the Door Mid-travel

- 1 The door can be stopped immediately at any time by pressing the wall station's UP/DOWN ARROW button, the remote control's pushbutton, or press the START/STOP button on a remote keypad.
- 2 The next time the operator is activated, the door will move in the opposite direction.

- UP/DOWN ARROW pushbutton. ➤ NOTE: To signal that the vacation switch is locked, the operator's light will flash five times if a remote is activated in an attempt to open the door.
- 2 Slide the wall station's LOCK switch to the unlocked position to return the operator to normal operation.

Weather conditions may affect the door operation which could require some re-setting of the operator's adjustments. Doors may swell and become heavier during wet periods, door hinges and rollers might bind during cold periods. To insure safe operation of the door, perform the following tests, including any additional test steps described. **Every Month** 

## 1 With the door closed, pull the red release handle to

Garage door hardware (springs, cables, brackets, pulleys, etc.) are under extreme pressure and tension. DO NOT ATTEMPT TO LOOSEN, TIGHTEN OR ADJUST ANY DOOR HARDWARE. CALL A QUALIFIED GARAGE DOOR INSTALLATION PROFESSIONAL!

The garage door operator must not be installed and used on an unbalanced door. The operator's internal door force sensor will not function properly on an unbalanced door. Risk of serious injury or death may result.

## A WARNING A

Always perform the entire Door Force Safety System Test (see Section 14) after making any adjustments to the operator.

The tension spring in the traveler keeps the belt taut. The factory setting for the tension spring length is .9" long. If the tension spring is longer than 1", adjust the belt. 1 Hold the traveler so the adjustment wheel is visible through the large slot.

2 Use a flat blade screwdriver to turn the adjustment wheel to compress the tension spring until its length is between .9" and 1" long.

#### **Every Year**

Check the door hardware for lubrication needs. Lubricate door hinges, rollers and bearings according to door manufacturer's recommended procedures.

#### 17 Troubleshooting

LAMP FLASHES TROUBLE CODE	PROBLEM	CAUSE	REMEDY	
1 FLASH	No problem	Remote control entered into memory	Add any additional remote controls (MegaCode™ type only)	
2 FLASHES	Door won't close	Shorted wall station wires	Check wall station wires. Be sure both are connected to the terminal screws. Check for a staple in the wall station wires. Remove any staples compressing the wire.	
3 FLASHES	Door won't close	Safety beam obstacle	Check for obstacles. Align the safety beam (Section 11)	
4 FLASHES	Door reverses or won't open or close	Open or Close force exceeded, or motor thermal shutdown	Check for binding or un-balanced door. Adjust the door force (Section 14). If motor had thermal shutdown, wait 30 minutes and retry.	
5 FLASHES	Door won't open from transmitter	Remote was activated while vacation switch was locked	Unlock vacation switch on wall station	
6 FLASHES	Motor ran longer than 30 seconds	Mechanical or electronic failure	Call Technical Services Group for assistance	

#### **FCC NOTICE**

Changes or modifications not expressly described in this manual or approved by the manufacturer could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- · Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. • Consult the dealer or an experienced radio/TV technician for help.

This Linear product is warranted to the original consumer against defects in material and workmanship for:

#### LIMITED WARRANTY
